About Me

DevOps/Cloud Engineer with expertise in cloud architecture and infrastructure automation. Proven track record of orchestrating cloud infrastructure and reducing manual operational toil through CI/CD and serverless solutions. Experienced in managing hybrid cloud migrations (AWS/Akamai), securing strategic vendor partnerships, and capable of contributing to backend development when needed.

Professional Experience

DevOps/Cloud Engineer

STARVIEW (STARTUP)

Jun. 2025 - Present

Torino, Italy

- Engineered a **Private Cloud** ecosystem for a disaster assessment platform, implementing central authentication (**SSO**) via Keycloak to secure HashiCorp Vault, NextCloud, Mattermost, and OpenProject with unified access through a self-hosted dashboard.
- Designed an event-driven ML pipeline automating Python and Bash workflows via **Docker Compose** and **RabbitMQ**, decreasing manual operational time by **90%** and leveraging MinIO to replace legacy FTP access.
- Executed the migration of a legacy EC2 monolith to a **cloud-agnostic microservices** architecture on Akamai Cloud, utilizing **Terraform** and **Ansible** for fully automated provisioning.
- Architected a next-phase **AWS Serverless** solution (Amplify, AppSync, Lambda, Aurora Serverless) and migrated to **Supabase** as the backend platform, reducing development overhead and enabling the team to focus on the serverless migration.
- Proposed and designed a client-side data processing architecture using **Rust** compiled to **WebAssembly (WASM)**, enabling customers to process sensitive data locally in-browser while preserving data privacy.
- Established an automated delivery workflow where **GitLab CI** image builds trigger deployments via Ansible and **Docker Compose**, processed by a native runner on the deployment server.
- Engaged in **product design and roadmap planning** with stakeholders, translating customer requirements into technical solutions; led vendor negotiations securing **\$15k+ in service credits** from AWS and Akamai.
- Built and managed a **backend team of 3 developers**, handling recruitment from screening to onboarding, mentoring on Serverless patterns, and conducting code reviews.

AWS Terraform Docker Python Bash GitLab CI Serverless Event-Driven

Mentor & DevOps Specialist

APPLICATION DEVELOPMENT LIFECYCLE BOOTCAMP

Mar. 2026 - Present

Torino, Italy

- Co-organized an in-person bootcamp teaching the full **application development lifecycle** — from planning (**Unified Process**) through development, testing, and deployment — preparing students for intern and junior developer positions.
- Deliver hands-on sessions covering **Linux** fundamentals, **Git** version control, **Docker** containerization, and development workflow best practices.
- Design and teach backend and DevOps curriculum including **FastAPI** (with SQLAlchemy and Pydantic), **PostgreSQL**, **GitLab CI/CD**, S3-compatible object storage, and cloud compute fundamentals.
- Present the roles and responsibilities of backend and DevOps engineers, helping students understand how professional engineering teams operate in production environments.

Mentoring FastAPI Docker PostgreSQL GitLab CI Linux

Education

B.Sc. Computer Engineering

POLITECNICO DI TORINO

Oct. 2022 - Present

Torino, Italy

B.Sc. Mining Engineering

UNIVERSITY OF TEHRAN

Oct. 2017 - May 2021

Tehran, Iran

Projects

Multimedia Conversion

ACADEMIC PROJECT

- Created a **FastAPI**-based REST API for multimedia conversion, leveraging **FFmpeg** for video and audio transformations across **6 formats**.
- Engineered **asynchronous processing** using Python, enabling concurrent handling of multiple media operations.
- Containerized the application with **Docker**, ensuring consistent deployment across environments.
- Established **GitHub Actions** CI/CD pipeline for automated **AWS** deployment, eliminating manual steps.

FastAPI Python FFmpeg Docker GitHub Actions AWS

Go Server Management Tool

CLI DevOps UTILITY

- Developed a CLI tool using **Go** and **Bubble Tea** TUI framework for server management, **SSH** connections, and file transfers, utilizing crypto/ssh and io packages.

Go Bubble Tea SSH TUI

SnippetBox Web App

GO WEB DEVELOPMENT

- Built a full-stack web application using **Go's net/http**, **SCS** sessions, and **bcrypt** for secure authentication and session management.

Go net/http SCS bcrypt

Go Bill Splitter

GO WEB APPLICATION

- Built a web application for expense splitting using **Gin** framework, **GORM** ORM, and Go templates for server-side rendering.

Go Gin GORM

Technical Skills

Programming Languages	Python	Go	Rust	Java	C			
Cloud & DevOps	AWS	Lambda	Fargate	AppSync	Amplify	Aurora Serverless	Akamai Cloud	
	Docker	Terraform	Ansible					
Security & Auth	HashiCorp Vault	Keycloak	AWS Cognito	OpenID Connect				
Observability	AWS CloudWatch	Prometheus	Grafana	Elasticsearch	Logstash	Kibana		
Databases & Storage	PostgreSQL	MongoDB	Redis	MinIO				
CI/CD & Automation	GitLab CI	GitHub Actions	Jenkins	n8n				
Backend & Infrastructure	RabbitMQ	Supabase	Hasura	NginX	Traefik			
Python Ecosystem	FastAPI	Pydantic	SQLAlchemy	boto3	Chalice	Mangum	NumPy	SciPy
Go Ecosystem	net/http	Gin	SCS	Bubble Tea				
Tools & Systems	Git	REST	GraphQL	Node.js	Linux	NixOS	Bash	
Architecture	Microservices	Serverless	Agile/Scrum					

Soft Skills

Team Leadership Mentoring & Teaching Negotiation Communication

Problem Solving Initiative Adaptability

Languages

Persian	●●●●●	Native
English	●●●●○	Fluent (C1)
