DevOps / Cloud Engineer

About Me

DevOps / Cloud Engineer at an early-stage Italian startup — joined as the early DevOps hire and now own platform migration, security incident response, and vendor strategy. Career switcher from Mining Engineering; years of fieldwork taught the stakeholder negotiation and composure under pressure that hold up when production breaks and customers are watching.

Professional Experience

DevOps / Cloud Engineer

Jun. 2025 - Present

STARVIEW (EARLY DEVOPS HIRE) — B2B DAMAGE ASSESSMENT PLATFORM

Torino, Italy

- Migrated a legacy EC2 monolith to a **cloud-agnostic** Akamai (Linode) static-CDN deployment (**Terraform + Ansible**) — **9× faster builds** (8m → 55s), **25% faster** DB queries, and near-zero hosting cost on the new platform.
- Led **incident response** to a **production breach** (Next.js “React2Shell”, CVE-2025-55182, Dec. 2025) — removed the injected **cryptominer** mid-customer-engagement, rebuilt the server, and re-architected with **Docker service isolation**; a follow-up exploit was **contained automatically**, requiring only a software update.
- Built an event-driven ML pipeline in **Docker Compose + RabbitMQ** automating **Python + Bash** workflows, cutting manual operations by **90%**; replaced legacy FTP with MinIO.
- Built a **Private Cloud** with **SSO** via Keycloak securing **4 services** — HashiCorp Vault, NextCloud, Mattermost, OpenProject — behind a self-hosted dashboard.
- Partnered on **product design and roadmap**, re-scoping delivery to absorb shifting customer deadlines; represented StarView at industry events (Corley & AWS Italy Nov. 2025, Akamai partner meetings) — sourced engineering practices and **\$15k+ in service credits**.
- Designed the next-iteration architecture — **microservices** on **AWS Serverless** — enabling independent service scaling and deployment.
- Mentored 3 backend developers on **Serverless** patterns; ran code reviews and onboarding sessions.

AWS Terraform Docker Python Bash GitLab CI Serverless Event-Driven

Backend & DevOps Instructor

Mar. 2026 - May 2026

APPLICATION DEVELOPMENT LIFECYCLE BOOTCAMP

Torino, Italy

- Co-organized a 3-month **full-stack development bootcamp** preparing **5 intern/junior candidates** — taught backend (**FastAPI + SQLAlchemy + Pydantic, PostgreSQL**), DevOps fundamentals (**Docker, GitLab CI/CD, Linux + Git**), and the application development lifecycle.
- Authored an interactive **Git** curriculum (24 exercises across 5 parts) published as a public teaching resource on GitHub.

Mentoring FastAPI Docker PostgreSQL GitLab CI Linux

Education

B.Sc. Computer Engineering

Oct. 2022 - Jun. 2027

POLITECNICO DI TORINO

(Expected)

Torino, Italy

- 30L/30 (honors)** in Cybersecurity and National Defence; **30/30** in Music and Multimedia Streaming (the course behind the MECAS project). Coursework: Operating Systems, Computer Networks, Databases, Algorithms, OOP, Computer Architecture.

B.Sc. Mining Engineering

Oct. 2017 - Jan. 2022

UNIVERSITY OF TEHRAN

Tehran, Iran

Projects

MECAS — Media Conversion & Streaming

Mar. 2025

ACADEMIC FINAL PROJECT

- **FastAPI** service for audio/video processing — **SciPy** + **NumPy** audio DSP (gain, voice enhancement, noise reduction) and **FFmpeg** video pipelines (grayscale, color inversion, frame interpolation, upscaling) across MP4/AVI/MOV up to 200MB.
- Modular layout across **4 packages** (api, filters, formatings, frontend) — browser drag-and-drop with real-time filter parameter control.
- **Docker Compose** full stack + **GitHub Actions** CI/CD deploying to **AWS**.

FastAPI Python FFmpeg SciPy Docker GitHub Actions AWS

Go Side Projects

Apr. 2025

PERSONAL PROJECTS

- **Server Management Tool** — Go CLI with a **Bubble Tea** TUI for picking servers and SSH keys from a YAML config, then dispatching **ssh** and **rsync** commands.
- **SnippetBox Web App** — Full-stack web application using **Go's net/http**, **SCS** sessions, and **bcrypt** for secure authentication and session management.
- **Bill Splitter** — Web application for expense splitting using **Gin** framework, **GORM** ORM, and Go templates for server-side rendering.

Go Bubble Tea SSH net/http SCS bcrypt Gin GORM

Technical Skills

Languages	Python	Go				
Python Stack	FastAPI	Pydantic	SQLAlchemy	boto3	NumPy	SciPy
Go Stack	net/http	Gin	GORM	Bubble Tea		
Cloud & DevOps	AWS	Akamai Cloud	Digital Ocean	Docker	Terraform	Ansible
Security & Auth	HashiCorp Vault	Keycloak	OpenID Connect			
Observability	Prometheus	Grafana	Sentry			
Databases & Storage	PostgreSQL	Redis	MinIO	S3	R2	
CI/CD & Automation	GitLab CI	GitHub Actions	Jenkins			
Backend & Infrastructure	RabbitMQ	Supabase	NginX	Traefik		
Tools & Systems	Git	REST	Linux	NixOS	Bash	
Architecture	Microservices	Serverless	Agile/Scrum			

Personal Strengths

Calm under pressure Adaptability Negotiation Mentoring

Languages

Persian (Native) | English (Fluent, C1)

Learning & Interests

Rust Kubernetes Kafka Azure AI/ML Embedded Systems WASM

Certifications

In Progress	Certified Kubernetes Administrator (CKA) , The Linux Foundation
2026	Building with Claude API Introduction to MCP , Anthropic Claude Academy — API engineering and tool integration
2026	Claude on Amazon Bedrock Claude on Google Vertex AI , Anthropic Claude Academy — ML deployment on AWS and GCP
